

# Public Information Meetings

# MHK ↔ PT

## Big Blue River 2<sup>nd</sup> Connection Cost-Benefit Analysis

# Agenda

- **Background**
- **Route Overviews**
- **Design Criteria**
- **Report Findings**
- **Next Steps**
- **Further information**

# Background

## **2009 US-24 Corridor Management Plan**

- Addresses needs on Corridor (future 6-lanes)

## **2012 Marlatt – Junietta Study**

- Multiple spur options from US-24 to Marlatt Ave
- New bridge
- \$34 to \$50 million

## **2017 Bluetooth Study & TDM**

- Data projects limited usage of Junietta-Marlatt connection
- KDOT's focus is US-24

# Background

## Funding

No State (KDOT) \$

## Engineering Study

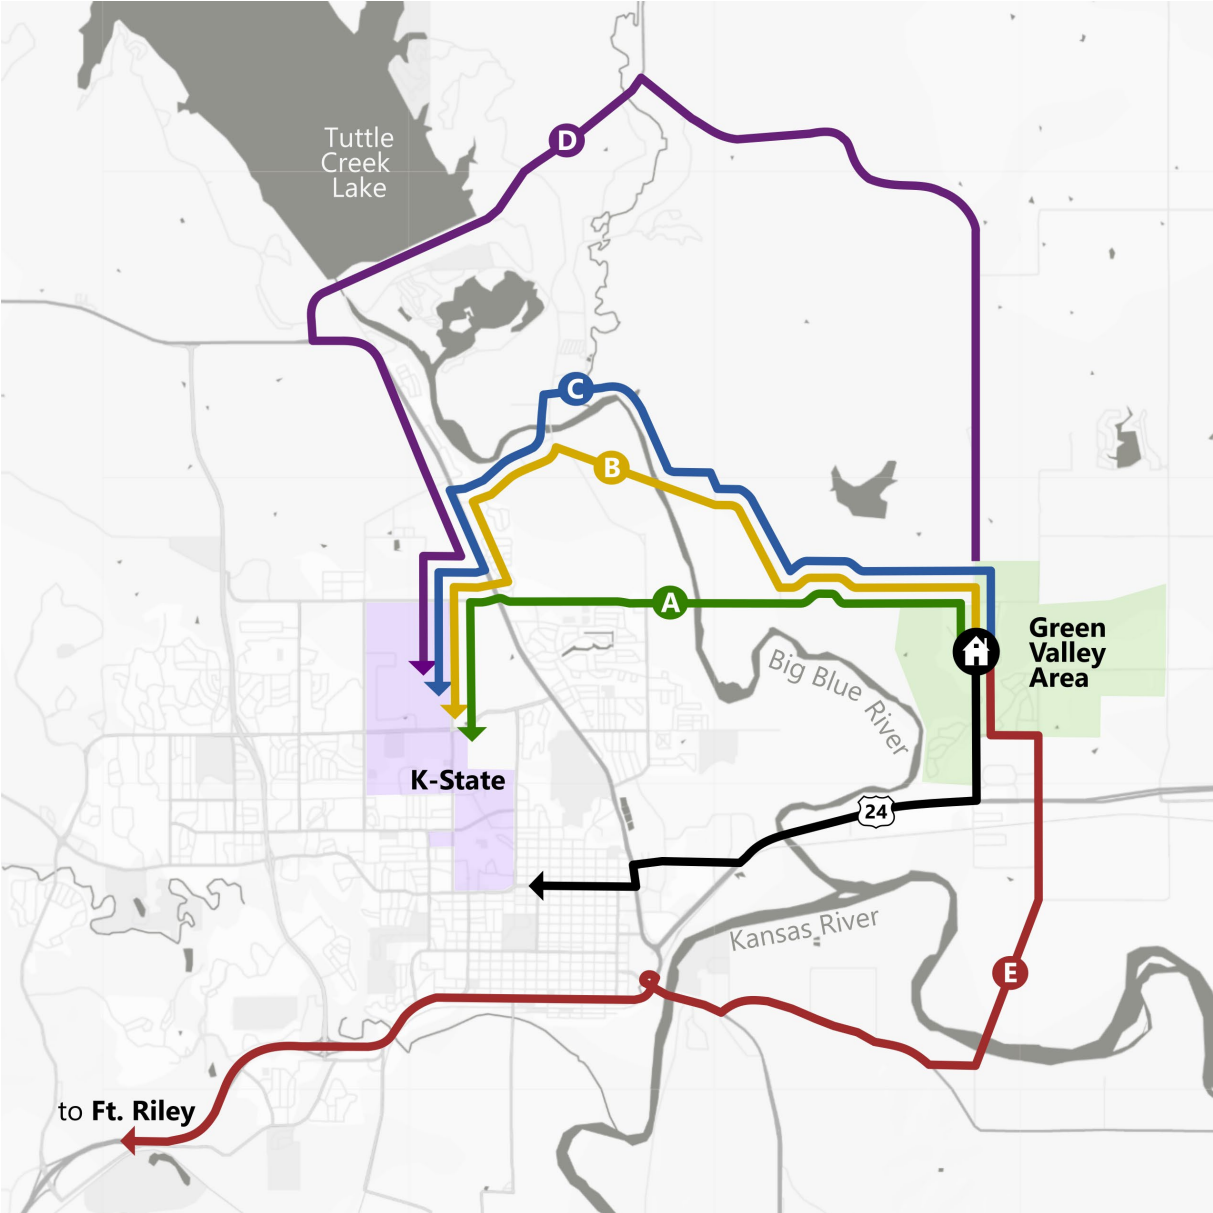

## Admin, Final Report, & Public Outreach

This study **does not select a route to be built**, rather the analysis provides facts, figures, and pros & cons of each route.

# Route Overviews

- A
- B
- C
- D
- E

# Route Overviews

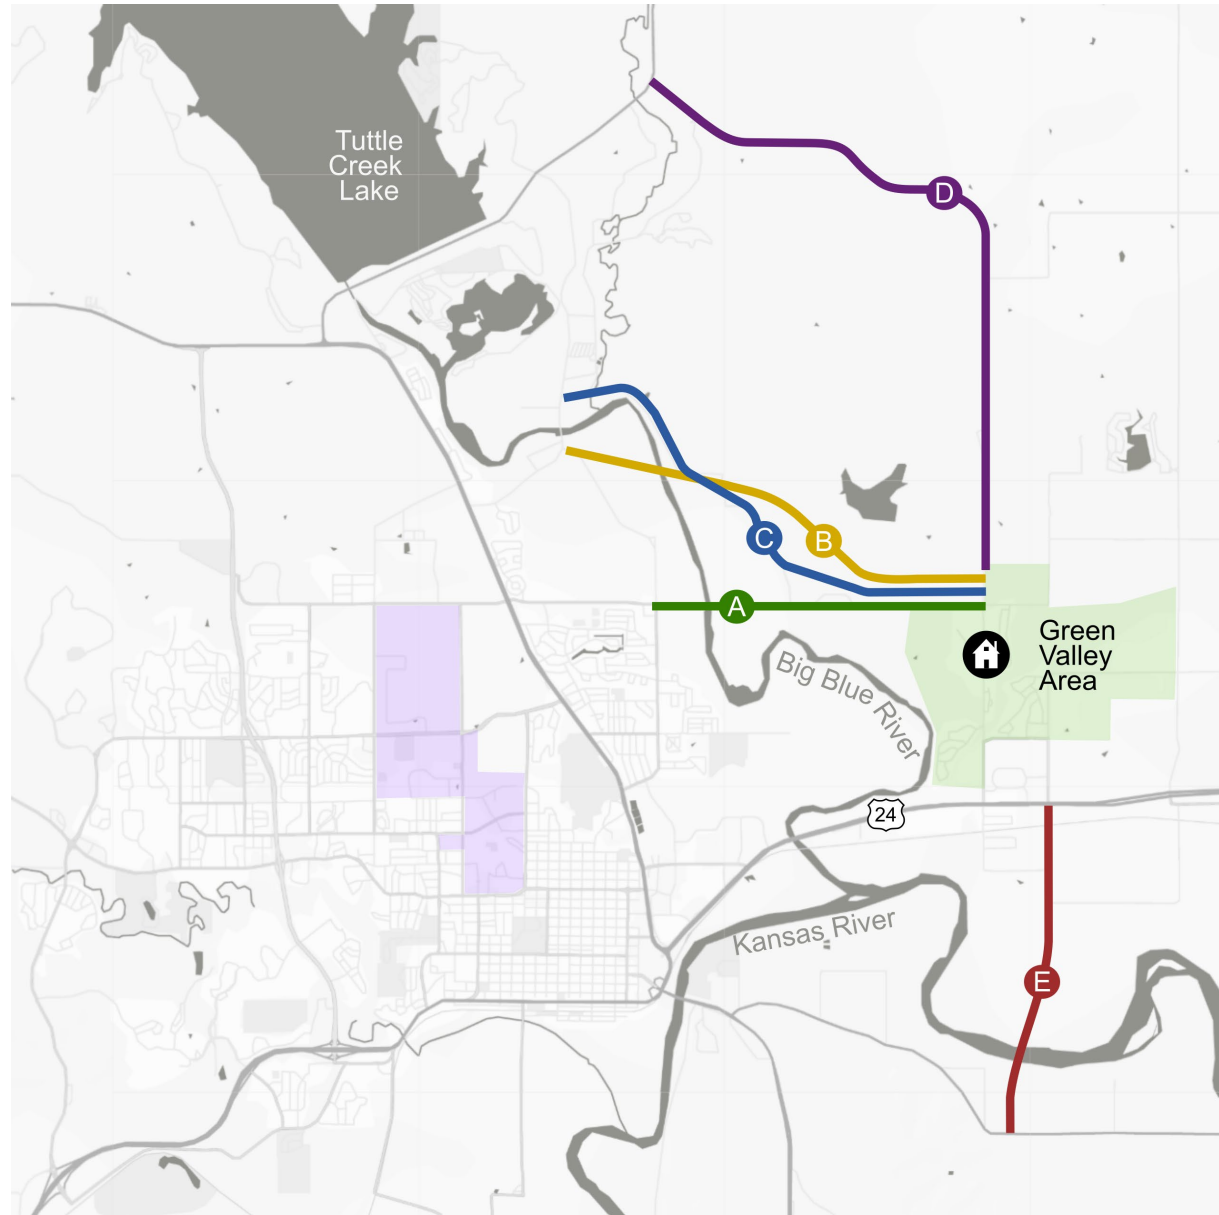

A

B

C

D

E

# Design Criteria

Criteria dictate **roadway design & property impacts...**  
which drive project **costs.**

---

Lanes	<b>2 - with shoulders</b>
Speed Limit	<b>40 mph</b>
Road Classification	<b>Major Collector</b>
Right-of-Way	<b>100+ ft</b>
Max. Vertical Slope	<b>8%</b>

# Design Criteria

**Road Section**

**Bridge Section**

# Design Criteria

**Not a highway, but a rural 2-lane roadway**

# Report Findings: Metric Criteria

**Flooding**

**Route Length**

**Bridge Length**

**Right-of-Way/  
Private Property**

**ROW**

**Projected Daily  
Vehicles**

**Travel Time**

**Cost**

Flooding

# Flooding

Would the route be open during a 100-year flood?

- A**  No, Marlatt Ave & Casement Rd will be closed
- B**  Yes, Barnes Rd will be open
- C**  No, Dyer Rd & Blue River Rd will be closed
- D**  Yes, all roads will be open
- E**  No, Excel Rd south of US-24 will be closed

---

**B**

**C**

**D**

**E**

# Projected Daily Vehicles

# Projected Daily Vehicles

Avg. daily vehicles if the bridge was built **today**

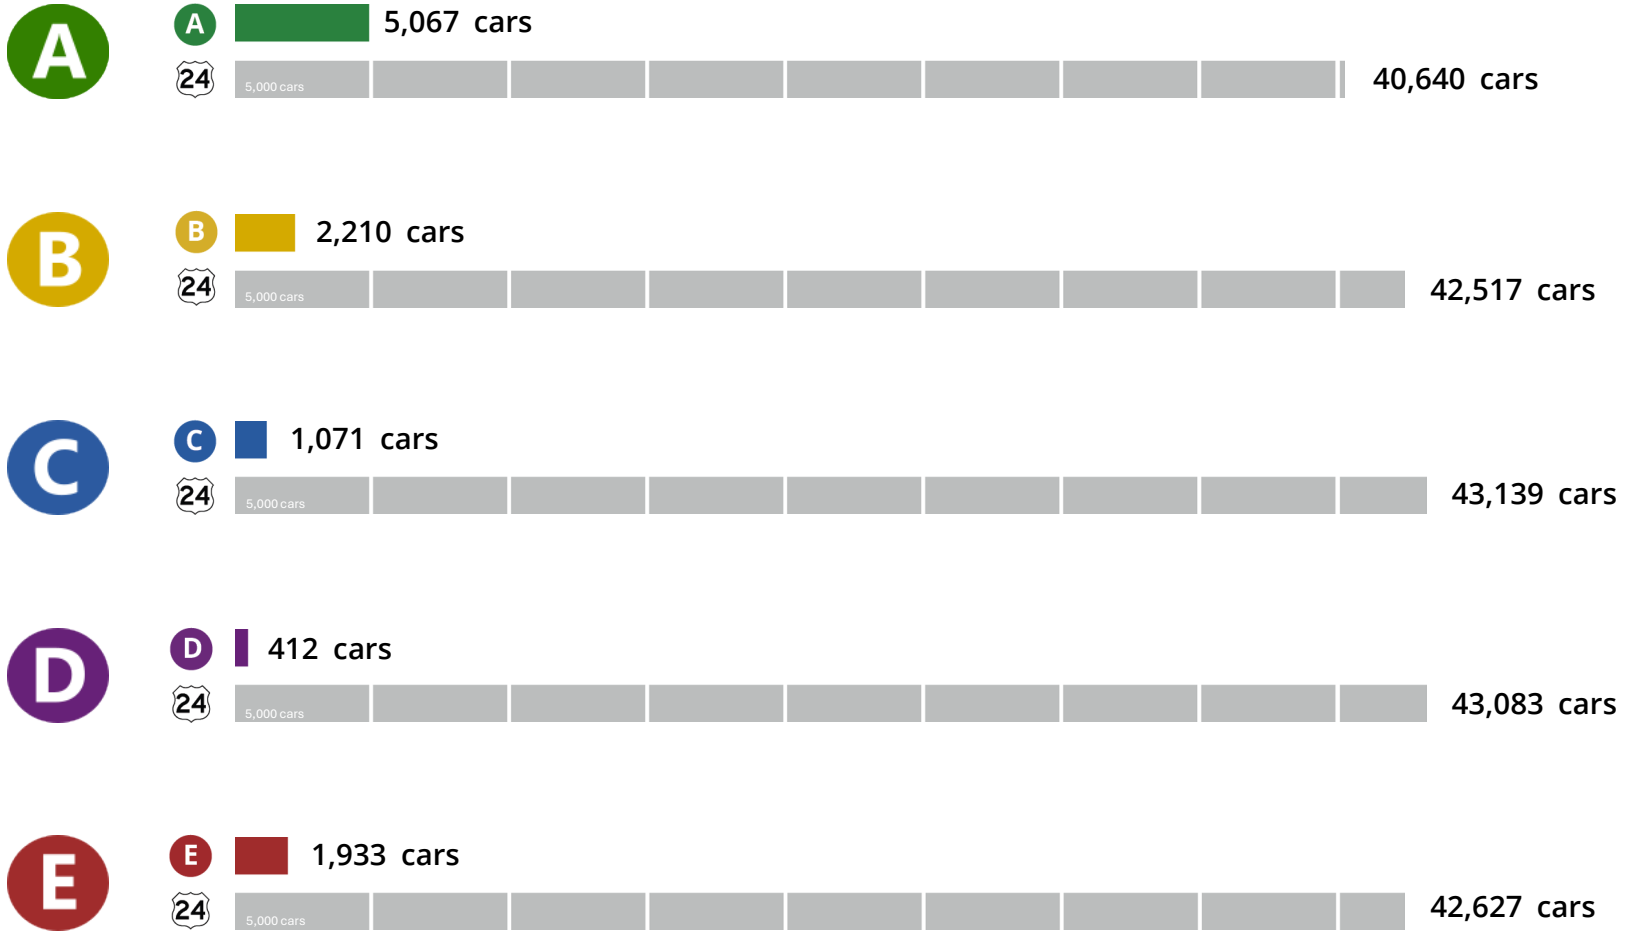

TDM calculation: today's population and E+C network with 2<sup>nd</sup> Connection route

# Projected Daily Vehicles

Avg. daily vehicles with high-end population growth in **2050**

TDM calculation: 2050 high-growth population and E+C network with 2<sup>nd</sup> Connection route

# Projected Daily Vehicles

**A**

Today 2,024 cars  
2050 5,067 cars

**B**

Today 609 cars  
2050 2,210 cars

**C**

Today 151 cars  
2050 1,071 cars

**D**

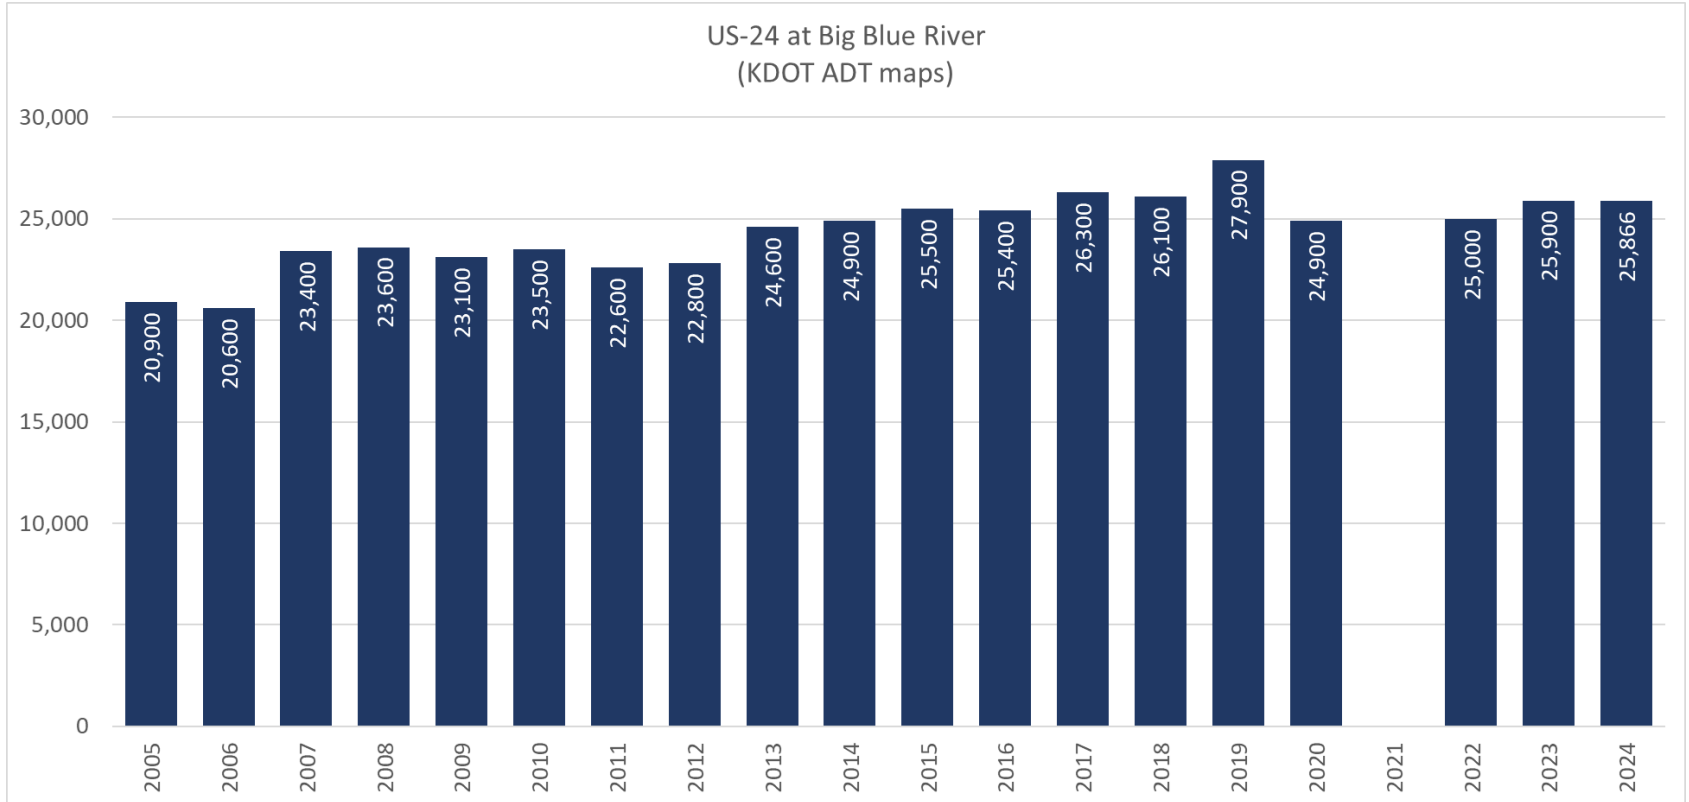

Today 112 cars  
2050 412 cars

**E**

Today 483 cars  
2050 1,933 cars

# Daily Vehicles: US-24

# Projected Daily Vehicles

Online & interactive

**Traffic Volume  
Comparison**

[www.flinthillsmmpo.org/2ndConnection](http://www.flinthillsmmpo.org/2ndConnection)

**Compare:**

- Today vs 2050
- Routes A-E vs US-24
- US-24 (4-lane) vs (6-lane)

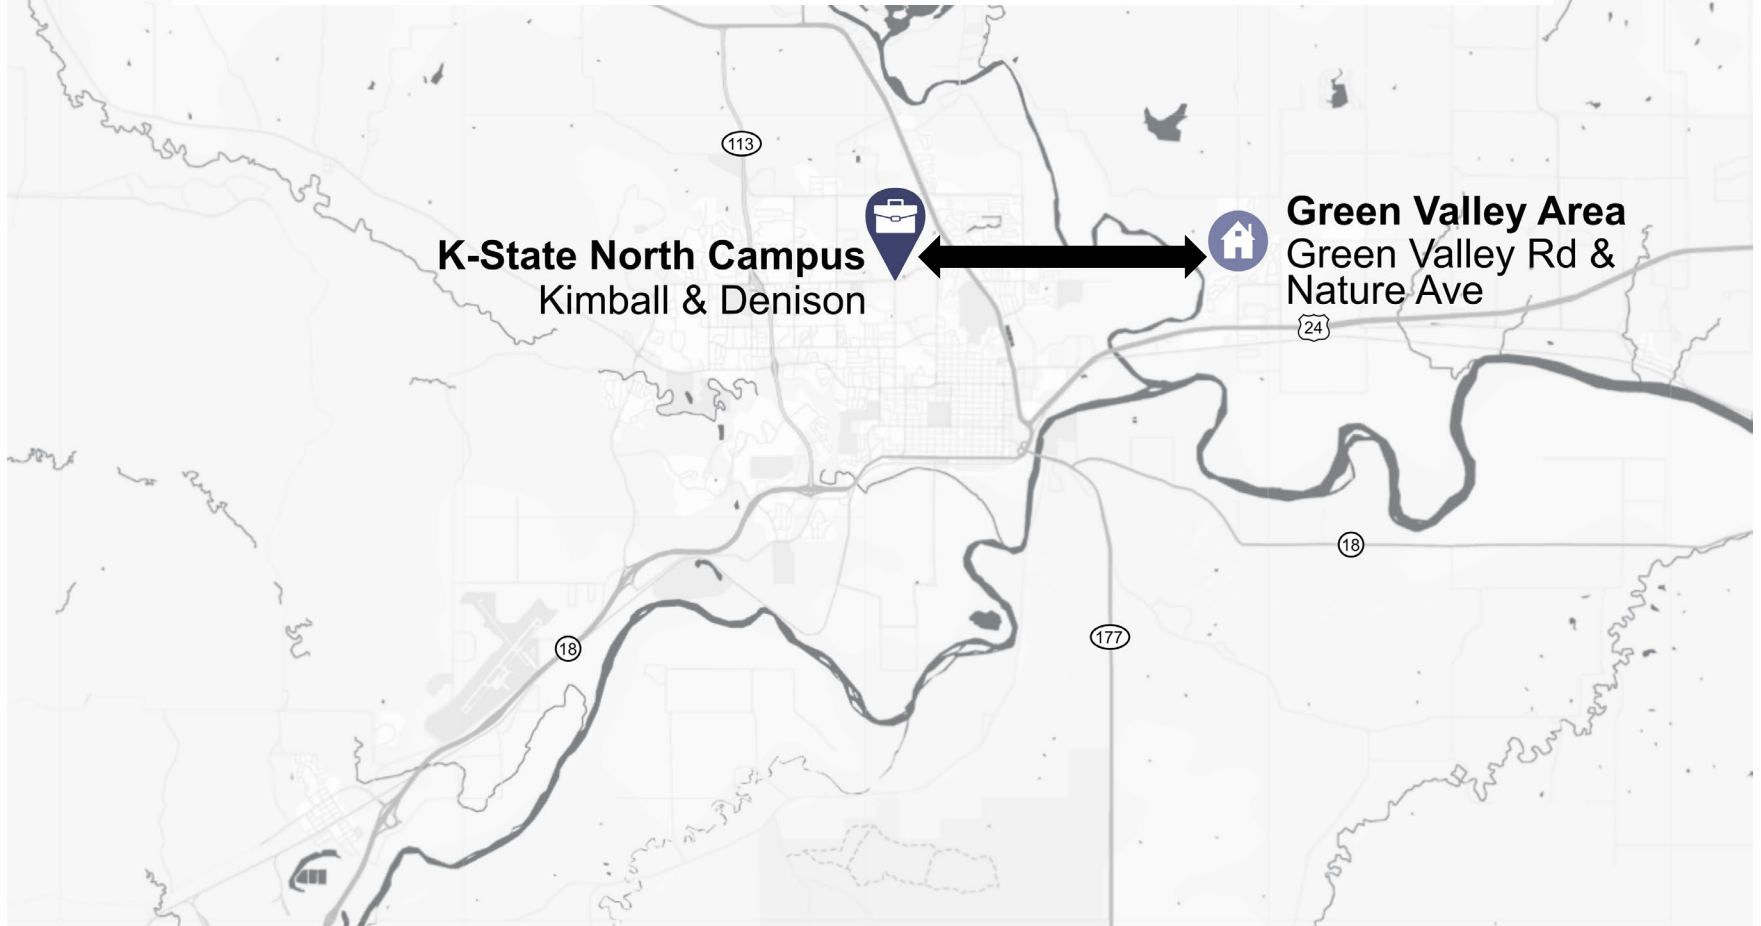

Travel Time

# Travel Time

- Data from the Travel Demand Model (TDM)
- Work to Home (5pm)
- Intersection to intersection (not door to door)
- US-24 (4-lanes)

# Travel Time

Avg. travel time if the new connection was built **today**

TDM calculation: today's population and E+C network with 2<sup>nd</sup> Connection route

# Travel Time

## Avg. travel time with high-end population growth in 2050

TDM calculation: 2050 high-growth population and E+C network with 2<sup>nd</sup> Connection route

# Travel Time

## Avg. travel time

**A**

**B**

This memo provides the complete findings on the routes of study.

Items include:

- Summaries of each route option
- Projected vehicle use of each route option
- Design criteria
- Plan drawings of proposed routes
- Profile drawings proposed routes & bridges
- Itemized cost estimates (planning level)

These summary boards visualize the data and findings from the Final Report Memo. They enable quick side-by-side comparisons of the five routes studied.

This interactive web map allows you to see in detail the five routes studied. Layers include:

- Route alignments
- Bridge locations
- Flood zones
- Right-of-Way & property impacts

This interactive tool allows you to compare travel time from Blue Township or St. George to various locations in Manhattan, using 2nd Connection Routes (ie. A vs B vs US-24, etc.). The tool shows predicted travel times for today and under future conditions in 2050.

This tool allows you to compare expected traffic volumes (number of vehicles) on 2nd Connection Routes (A - E), and how those routes impact traffic volumes on US-24. Travel volumes are provided for today and under future conditions in 2050.

**THANK YOU!**

**JARED TREMBLAY**, Director  
[tremblay@flinthillsmo.org](mailto:tremblay@flinthillsmo.org)

**FlintHillsMPO.org**

# Notes: Bridge Lengths

- Bridges were designed to span the flood zone
- Shorter bridges with roadway on berms would cause back-flooding into Manhattan and areas north

# Notes: ROW calculations

- Engineering plans were georeferenced in GIS.
- Project boundaries & ROW were drawn in GIS
- Acreage was calculated
- \$10k p acre (per PT County Engineer)
- Total ROW Costs:

Route	Acres of ROW	\$ p Acre	\$ of ROW
A	37.057	\$ 10,000	\$ 370,570
B	73.423	\$ 10,000	\$ 734,230
C	49.855	\$ 10,000	\$ 498,550
D	119.697	\$ 10,000	\$ 1,196,970
E	26.493	\$ 10,000	\$ 264,930

# Notes: Projected Daily Vehicles

## WHAT IS THE TRAVEL DEMAND MODEL?

**A tool that uses data to envision how people move throughout the MPO area and to test future development scenarios.**

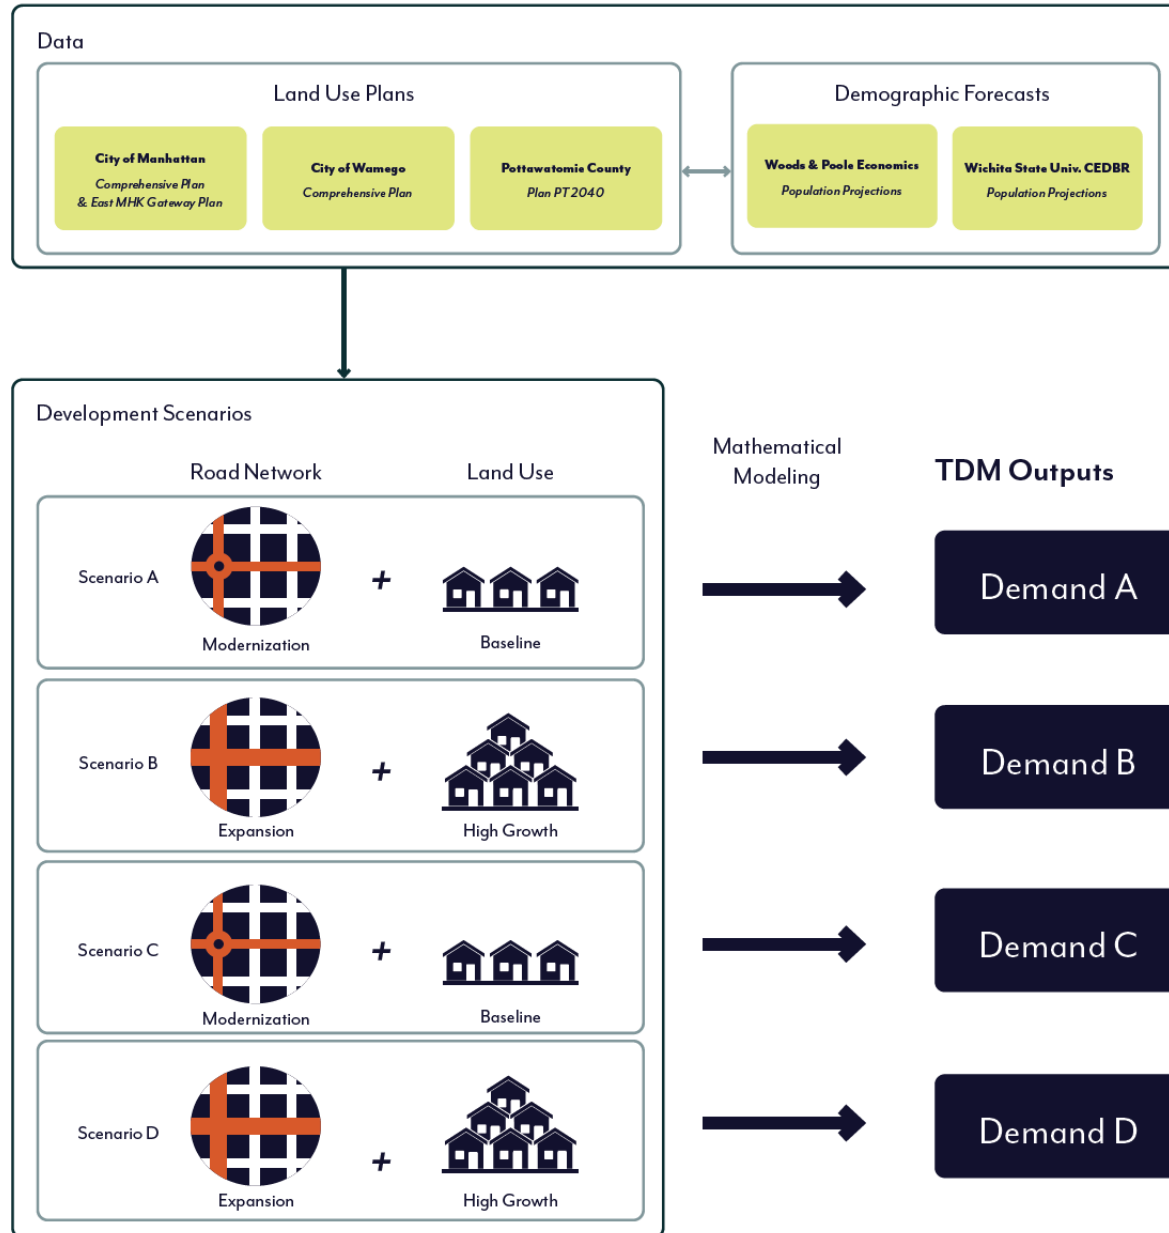

*A travel demand model (TDM) uses complex mathematics to predict future traffic conditions and travel times based on a variety of data, including population, land use, and road network characteristics. The TDM helps decision-makers evaluate the transportation system of today and the future and allows for the testing of projects and policies to find solutions.*

TDM calculation: 2050 high-growth population and E+C network with 2<sup>nd</sup> Connection route

TDM calculation: today's population and E+C network with 2<sup>nd</sup> Connection route

# Notes: Projected Daily Vehicles

## TDM Inputs

# Notes: Projected Daily Vehicles

		Today		2050		
		2022 Population		2050 Population		
		4-Lanes	6-Lanes	4-Lanes	6-Lanes	
E+C Network	No 2nd Connection		✓	✓	✓	✓
	2-Lanes	A	✓	✓	✓	✓
		B	✓	✓	✓	✓
		C	✓	✓	✓	✓
		D	✓	✓	✓	✓
		E	✓	✓	✓	✓
4-Lanes	A	✓	✓	✓	✓	

E+C (Existing + Confirmed): Today's road network with projects that are expected to be built (TIP projects). Then a scenario is built with each 2<sup>nd</sup> Connection option (A-E). 28 scenarios were run for this study.

# Notes: Travel Time

Green Valley Area	
Route	Distance (mi)
US-24	6.05
<b>A</b>	5.5
<b>B</b>	7.9
<b>C</b>	7.05
<b>D</b>	13.55
<b>E</b>	10.8
